

CMPT 3830: Machine Learning Work Integrated Learning-1

Team Charter Template

1. Team Name:

ALPACA

2. Team Member details:

- Manpreet Kaur Loyal : mloyal@norquest.ca
- Kirandeep Kaur : kkaur707@norquest.ca
- Ramon Rabusa : rrabusa@norquest.ca

3. Team Purpose:

The purpose of Team ALPACA is to collaboratively develop a data-driven machine learning solution for Go Auto that evaluates the impact of loyalty program engagement on dealership performance and customer behavior. Our goal is to apply machine learning, data analysis, and visualization techniques to uncover meaningful insights from real-world automotive service data and communicate these findings in a clear, business-oriented manner. Through this project, we aim to connect technical analysis with practical business decision-making while gaining hands-on, industry-relevant experience.

4. Team Goals:

- Long-term Goals:

We aim to :

- Successfully deliver a high-quality machine learning project that satisfies all course requirements and addresses Go Auto's objectives.
- Create effective customer and dealership segments using clustering methods.
- Generate meaningful insights and practical recommendations that provide clear business

value.

- Enhance teamwork, communication, and problem-solving skills relevant to future industry roles.
- Build a strong portfolio project that reflects real-world machine learning and analytics experience.

- Short-term Goals:

- Thoroughly explore and understand the Go Auto dataset.
- Clean, preprocess, and engineer relevant features required for the loyalty-based analysis.
- Perform exploratory data analysis (EDA) to identify key patterns and trends.
- Implement clustering and comparative analysis models aligned with the assigned problem statement.
- Prepare clear visualizations and presentations for Demo-1 and Phase-1 submissions.

5. Team Norms and Expectations:

- Communication Protocols:

- The primary mode of communication will be through group messaging via Slack and email.
- Team members are expected to respond to messages within 24 hours on weekdays.
- Urgent messages should be acknowledged as soon as possible.

- Meeting Frequency:

- The team will meet once per week for regular progress updates.
- Additional meetings may be scheduled as deadlines approach or if challenges arise

- Decision-making Process:

- Decisions will be made collaboratively through discussion and agreement.
- If consensus cannot be reached, the team will rely on project requirements and course objectives to guide the decision.

- Conflict Resolution:

- Any disagreements will be handled respectfully through open and constructive discussion.
- If conflicts continue, decisions will be guided by project requirements and course objectives.
- If necessary, the instructor will be consulted to help resolve the issue.

6. Roles and Responsibilities:

Define the role and responsibilities clearly for each group member.

~ Manpreet Kaur Loyal : Responsible for project coordination, problem understanding, feature engineering, and linking machine learning results to business insights. Also contributes to data analysis, implementation, result interpretation, and documentation.

~ Kirandeep Kaur : Responsible for dataset exploration, data preprocessing and feature preparation. Also contributes to data analysis, machine learning implementation, creation of visualizations and documentation of findings for reports and presentations.

~ Ramon Rabusa : Responsible for implementing clustering algorithms, ML model development, optimization, and validation. Also statistical analysis and model performance evaluation. Ensures code quality assurance and Github repository management.

7. Communication Plan:

- Tools Used for Communication:

- Slack , Outlook

- File Sharing Method:

- Slack, Google Drive for datasets, code notebooks, reports, and presentations

- Meeting Schedule:

- Weekly meeting time: Once per week (day and time to be agreed upon by the team and updated as required)

- Additional working sessions scheduled 1 week before major deliverables:

1. Demo 1 prep: Feb 3-9
2. Phase 1 Report: Feb 20-26
3. Demo 2 prep: Mar 3-9
4. Phase 2 Report: Mar 13-19
5. Final Demo prep: Mar 31-Apr 6

- Emergency meeting protocol:

- Emergency meetings will be requested through Slack with a clear reason for urgency.
- Meetings may be conducted online if in-person meetings are not feasible.

8. Accountability:

- How progress will be tracked:

- Daily async standups in Slack (#daily-standups channel) by 9 PM each day
- Shared Google Sheet tracking all deliverables, milestones, and task ownership
- GitHub Projects for code-related tasks and technical issues
- Weekly Sunday evening team sync (7:00-8:30 PM MST) for progress review and next week planning

- How will team members be held accountable for tasks?

- Every Sunday, each member posts week commitments in Slack with specific tasks and deadlines
- If unable to meet deadline, member notifies team via Slack 48+ hours in advance (or immediately in emergencies) with revised timeline
- All major deliverables (reports, demos) undergo peer review by two other team members 24-48 hours before submission
- Mid-project check-in (Week 7: Feb 24-27) to assess workload balance and adjust responsibilities if needed
- Task completion tracked in shared document of our preference with color-coded status (Green=Done, Yellow=In Progress, Red=Blocked)

9. Signature of Commitment:

Name of the Member	Signature	Date
Manpreet Kaur Loyal	Manpreet	01/22/2026
Kirandeep Kaur	Kiran	01/22/2026
Ramon Rabusa	Ramon	01/22/2026
